1. Glossary

Sr#	Term	Description
1	TPS	Third Party Software e.g. CTCL Solution
2	CTS	Central Trading System
3	IEC	IIBX Exchange Connector. A CTS component which TPS would connect to over TCP & UDP/Multicast channel.

2. Introduction

This document describes the API specifications for communicating with IIBX Exchange Connector. API specifications are based on the proprietary protocol and cover transaction handling & market data broadcast only. IIBX Exchange Connector currently provides for translation of proprietary messages only and does not provide the complete functionality provided by a Central Trading System.

The exchange requires that the vendor/exchange's member undergo a conformance test upon completing development of the interface. The vendor/exchange's member must contact the exchange to schedule an appropriate period for testing.

The vendor/exchange's member may contact the Information Technology Division of the exchange to seek clarification at:

4. Type of Communication between TPS & CTS

There are typically two types of communication that would take place between TPS & CTS. Please find them below:

- **Interactive Messages**

Communication is initiated by TPS by sending the message and in fulfillment to that, CTS would send response message(s). Communication of these messages would take place over the TCP Connection.

Example: Add Order, Modify Order, Download Pending Orders etc.

- **Notification Messages**

No communication is originated by TPS. CTS would send notification message on occurrence of respective events in the system.

- Unicast Message

These messages are sent to specific dealers only (not the entire market). These messages are sent over the TCP connection.

Example: Trade Notification, Stoploss Order Conversion etc.

- Broadcast Message

These messages are sent to the entire market. These messages are disseminated over UDP/Multicast channel.

Example: Market Picture Broadcast, Trade, Market Session Change etc.

Note:

Any message - TPS to CTS or CTS to TPS - must contain first two bytes as Message Length. The message length in these two bytes will be binary encoded in little endian format. This is not applicable to **IEC Lookup Service Response Message** and the **FIRST MESSAGE**.

5. Sequence of Operations

Step 1: IEC Lookup

TPS initiates the IEC Lookup activity. TPS sends open TCP Client Socket request at IEC Lookup Service. IEC Lookup Service checks the validity of the TPS IP Address and responds accordingly over the same TCP socket connection. After the response is sent, the TCP Socket is immediately closed. If the request passes through successfully, the response will contain IP Address & Port details for both TCP & UDP/Multicast Group and Exchange published encryption key segment. TPS shall use the same for making connection to IEC.

Step 2: Establish Connections with IEC Host

TPS shall open two connections with the IEC:

- TCP: for Interactive and Unicast Notification Messages
- UDP/Multicast: for Market Data & Other Information Broadcast Notification Messages

Step 3: Logon to CTS

TPS shall initiate the Logon operation by sending the Login Message Packet to IEC over the TCP channel.

Step 4: Execute Download Queries

Execute various download queries.

Step 5: Continuous Session for Trading Activities

TPS user can now continue trading activities like Order Placement, Order Modify etc. TPS will keep receiving notification from the CTS.

IEC Lookup Service Response Message Structure

IEC Lookup service response message is a binary array bearing the following structure. Please note that Integer values are in Little Endian byte order.

Sr#	Field Name	Type & Max Len	Start Index	Description
1	Message Type	Integer	0	Value: 1
2	Message Tag	Integer	4	Message Sequence No
3	Response Code	Integer	8	0 – Success > 0 - Failure
4	Response Details	Text (100)	12	
5	IEC Service IP	Text (15)	112	<ul style="list-style-type: none"> TCP Connection For Interactive and Unicast Notification Messaging
6	IEC Service Port	Integer	127	
7	Multicast Group IP	Text (15)	131	<ul style="list-style-type: none"> Multicast Connection For Broadcast Notification Messaging
8	Multicast Port	Integer	146	
9	Encryption Segment	Key Text (8)	151	Use this to generate AES Key for encryption and decryption of messages

*Values in Filed #5 to Filed #9 will be populated only in case when Response Code = 0

IEC Lookup Service Response List

Response Code	Response Text	Description
0	IEC Lookup Successful	
1	Reject: Dealer is not active	
2	Reject: Invalid IP Address	Originating IP Address (of TPS Machine) is not registered in the CTS
3	Reject: Couldn't locate IEC Machine	No Machine matching the IEC Lookup Request found
4	Reject: Couldn't locate IEC Instance	No related IEC instance found for the requesting IP Address

TCP connection with IEC- Response Message Structure

On opening the TCP connection from TPS with the designated IEC (received IP Address & Port during IEC Lookup activity), IEC would send the Connection Response Message to TPS. This should be considered as the FIRST MESSAGE. The FIRST MESSAGE is in text format and the structure of the same is as described below:

IEC Connection Response					
Sr#	Tag	Type (Max. Length)	Value	Nature	Description
1	API Name	Text (20)	IIBX_EXCH_CTCL	Compulsory	Value in the Request Message will be echoed here
2	API Version No	Text (10)	1.0.1	Compulsory	
3	Message Type	Text (30)	CONN_REQ_STATUS	Compulsory	
4	Response Code	Integer		Compulsory	0 - Success > 0 - Failure
5	Response Details	Text (100)		Compulsory	

IEC Response List

Response Code	Response Text	Description
0	IEC Connection Successful	
1	Connection Failed. Invalid Originating IP Address	
2	Connection Failed. Invalid Key	
3	Connection Failed. Unknown Issue (Remove)	
4	Connection Failed. Unknown Issue (Add)	
5	Terminal Type is not a CTCL Terminal	

6. List of Messages

[Interactive Messages]

Sr#	Message Id	Description
1	LOGON	Logon request to IEC
2	LOGOFF	Logoff request to IEC
3	CHANGEPASS	Change Password
4	ORDER_ADD	Add Order Request
5	ORDER_MOD	Modify Order Request
6	ORDER_DEL	Delete Order Request
7	DL_PRODUCT	Download Product List
8	DL_CONTRACT	Download Contract List
9	DL_PENDING_ORDERS	Download Pending Orders (Limit & Stoploss Converted)
10	DL_TRADE_BOOK	Download Trades
11	DL_PENDING_SL_ORDERS	Download Stoploss Orders (Yet to Trigger)
12	DL_RETURN_ORDERS	Download Returned Orders
13	DL_RETURN_SL_ORDERS	Download Returned Stoploss Orders
14	DL_MARKET_SUMMARY	Download Market Summary
15	DL_CLIENTWISE_MARGIN_MTM	Download Client-wise Margin & MTM
16	DL_CLIENTWISE_OPEN_POSITION	Download Client-wise Open Position
17	DL_MARKET_PICT	Download Market Picture

[Unicast Notification Messages]

Sr#	Message Id	Description
1	N_TRADE_EXECUTED	On execution of Trade
2	N_STOPLOSS_CONVERTED	On Stoploss Order Trigger
3	N_LIMIT_VIOLATION	On Limit Violation
4	N_KILL_ORDER	On IOC Order Kill
5	N_ORDRET_STPC	Order Return – Due to Self-Match Trade Prevention

[Broadcast Notification Messages]

Sr#	Message Id	Description
1	BC_TRADE	On execution of Trade
2	BC_CONTRACT_DPR_HIT	On DPR Hit
3	BC_CONTRACT_DPR_RELAXED	On DPR relaxation
4	BC_SESSION_CHANGE	On change in Market Session
5	BC_MARKET_PICTURE	On change in Order Book
6	BC_TIME	CTS Time Dissemination

10. Encryption of Data-In-Motion

All the messages between TPS and CTS over the TCP channel must be in encrypted form. The IIBX CTS has implemented AES 128-bit encryption. To encrypt any message in AES 128 bit, it requires **Key [KEY]** and **Initialization Vector [IV]**. Both the KEY and IV are fixed length - 16 characters in length.

How to build the [KEY]

[KEY] = First 8 Characters of the Password + Encryption Key Segment*

How to build [IV]

[IV] = First 16 characters of (Password + Password)

Example:

Password: Reset.123

Encryption Key Segment: 12345678

[KEY] = **Reset.12**12345678

[IV] = First 16 Characters of (**Reset.123Reset.123**) = Reset.123Reset.1

**Encryption Key Segment will be supplied as a part of IEC Service Lookup Response Message*

Please note that IEC Service Lookup Response Message and IEC Connection Response Message are NOT encrypted.

11. Technical Validation

Interactive Messages (Request) from TPS would go through Technical Validation and then Business Validation. The business validation failure will be notified by response message of the respective request message. However, in case of technical validation failure will be notified by single message structure which is described as below:

Technical Validation Failure Message

Trade Notification Message					
Sr#	Tag	Type (Max. Length)	Value	Nature	Description
1	API Name	Text (20)	IIBX_EXCH_CTCL	Compulsory	As issued by IIBX
2	API Version	Text (10)	1.0.1	Compulsory	As issued by IIBX
3	Message Type	Text (30)	MSG_FAILURE	Compulsory	
4	Failure Reason	Text (500)		Compulsory	

Failure Reasons

Sr#	Failure Reason	Description
1	Dealer is not Logged on	When Dealer is not logged on and TPS is sending messages other than LOGON Message
2	CM/TM/Dealer Mismatch	CM Code, TM Code & Dealer Code combination in the TPS Message is invalid
3	Message Type not implemented: <Message Type>	Message Type in the Request message is invalid
